Why Choose PVC Understanding the Benefits

The Right Choice for Low-Slope Roofing Products

800-786-1492 • mulehide.com

Rugged • Time-Tested • Weather-Tested

Proven Performance

• Over 50 years of proven performance - Same basic formulation

Chemical Resistance

- High resistance to greases, oils, animal fats, jet fuels, acids, and other chemicals compared to other single-ply membranes
- Great for restaurants, food processing, airports and manufacturing facilities

Fire Resistance

- Exceptional fire resistance. PVC is self-extinguishing when the source of the flame is removed
- Great option to achieve steeper slope UL fire ratings, than with TPO or EPDM Membranes
- Perfect for buildings with solar panels or other electrical components, restaurants with potential for rooftop grease or oil fires, and more

Highly Reflective Options – (Cool Roof)

Most PVC membranes are highly reflective, with cooling and energy cost savings in warmer climates.

Heat Weldable Seams

- · Heat fusion allows for seams of exceptional strength and watertightness
- Properly hand-welded seams exhibit "bleed-out," a visual indicator of a good weld to the operator

Mule-Hide KEE HP Membrane - The Premium PVC Option

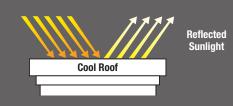

- KEE HP (High-Performance) is an additive that enhances chemical resistance even beyond standard PVC membrane
- The HP (High-Performance) Advantage

KEE HP additive is a higher grade than standard KEE used by the majority of other manufacturers. Benefits over standard KEE include:

- Chemical Resistance
- Seam Weldability
- Cold-Temperature Flexibility

PVC KEE HP Chemical Resistance - Percent of Improvement					
Over Standard PVC (Aged 28 days at 140°F)					
Discol Fuel	lot Eugl	Dognut Oil	Animal Esta		

Diesel Fuel	Jet Fuel	Peanut Oil	Animal Fats
56%	42%	67%	61%

Why Choose PVC

Type IV Advantage

 Mule-Hide polyester reinforced PVC & KEE HP meets the ASTM (PVC Roofing Membrane standard)

Type III And IV Requirements

- Many manufacturers only meet Type III
- Type IV requires higher performance attributes than Type III (see chart)

Mule-Hide Type IV PVC % Increase Over Type III				
Tearing Strength	Elongation	Breaking Strength		
180%	66%	60%		

Optimal Membrane Construction

- Approximate 50/50 ratio between top and bottom ply
 - Some manufacturers have a significantly thinner top ply (weathering layer) to cut cost on valuable anti-weathering ingredients at the expense of performance
 - Mule-Hide PVC & KEE HP top ply is a thick, uniform blend of important ingredients like anti-microbials, heat stabilizers, and ultraviolet inhibitors
 - A thin top ply also makes the membrane far more prone to damage from abrasion (scuffing)

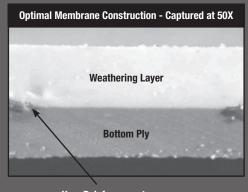

PVC & KEE HP System Options

- Mechanically Attached
- Fully Adhered
- Induction Welded

PVC & KEE HP Warranties

- Up to 30 Year NDL (No Dollar-Limit) warranties available
 - Available on commercial only
 - · Covers labor and materials, and is not limited to the original installed cost
 - Must be installed by a Mule-Hide warranty eligible applicator
 - Requires inspection by a Mule-Hide technical representative
- Up to 20 year residential warranties available
 - Material only warranty

Yarn Reinforcement (Polyester Scrim)
