Building Owner's Roof Care and Maintenance Guidelines ver. 2.01

Thank you for choosing a Mule-Hide Roofing System! Following are guidelines on how to care for your roof to help ensure a long useful service life. The manufacturer's warranty is not a maintenance program or agreement. There are various items associated with your roof system that are not covered under the warranty. It is the responsibility of the Building Owner to regularly inspect and maintain the roof.

Mule-Hide strongly recommends the Building Owner institutes an annual maintenance program with written documentation of any activities on the roof. Maintain a log of maintenance procedures and people accessing the roof. This aids the building owner in determining the source of any damage to the roof. Your roofing system should be inspected at least twice a year (once in the spring and once in the fall) and after every major storm. These inspections should be performed by a Mule-Hide Warranty Eligible Applicator or by someone specially trained in roofing systems.

READ YOUR WARRANTY CAREFULLY BEFORE EXECUTING ANY ROOF-TOP WORK OR FILING OF A CLAIM. Understand the Terms and Conditions to avoid adversely affecting the warranty.

General Guidelines

1. Keep the roof surface clean of debris, especially at drain areas to avoid clogging. Good roofing practice suggests that water not be allowed to remain on the roof for more than 48 hours after a rain. Keeping the roof clear of debris will allow for proper water run-off and avoid overloading the roof with standing water.

2. Keep chemical and petroleum products (acids, chemicals, solvents, greases, oils, or any liquids containing petroleum products) off the membrane to avoid degradation. If swelling occurs, contact Mule-Hide immediately.

3. Do not exhaust kitchen wastes (vegetable oils) or other animal fats directly onto the roof surface. If incidental contact is likely, contact Mule-Hide for recommendations on preventative measures.

4. TPO and PVC membranes may be used for restaurant roofs but must have a rooftop maintenance program in place to ensure that accumulations of animal fats/grease are regularly removed and the membrane surface is cleaned periodically. See Mule-Hide's Care and Maintenance Overview for specific cleaning instructions.

5. Walkways must be provided if regular rooftop traffic is required, such as servicing of rooftop equipment. Exercise caution when not walking on walkways, especially on white membranes (White-on-Black EPDM, Elastomeric Acrylic Coatings, TPO and PVC) since ice or frost build-up may not be visible. All membranes are slippery when wet.

6. When it is necessary for workers to be on the roof to service rooftop equipment, e.g., HVAC units, antennas, etc., workers should be cautioned to use walkways and to exercise care with their tools and equipment to avoid puncturing the roofing membrane. Mule-Hide recommends that the building owner or property manager keep a "Roof-top Maintenance and Activity Log" to track dates and activities by personnel or other trades.

7. Handprints, footprints, general traffic grime, industrial pollutants and environmental dirt may be cleaned from the surface of the membrane by scrubbing with detergent and water, then rinsing with clean water. To maximize and maintain reflectivity, white membrane(s) should be cleaned once every two years.

8. Keep roof maintenance items, such as counterflashings, metal curbs, metal ducts, etc. sealed watertight at all times. All exposed mastics and sealants regardless of the purpose or function, are required maintenance items to be remediated by the Building Owner, including but not limited to pitch pan and metal flashing sealants.

9. Loss of granules from mineral surfaced membranes is typical and not a manufacturing defect. In cases of granule loss that becomes more noticeable, additional surfacing should be applied as directed by Mule-Hide.

10. Protective elastomeric coating systems will oxidize and weather, losing overall dry film thickness. This is normal and not a defect in the material. Warranties that include an elastomeric coating as a protective surfacing of a membrane may require periodic recoating at specified intervals to maintain the warranty coverage. The Building Owner is responsible for all costs to perform any specified recoating.

11. Examine all areas adjacent to the roof, parapet walls and adjoining structures. Damage to items such as masonry, failing mortar joints, loose or missing sealants, loose stone or tiles, loose and improperly sealed counterflashings, etc., may be the source of leaks that are inadvertently blamed on the roofing system. These items need to be addressed by properly trained personnel to avoid damage to the roof system.

12. If any changes are to be made to the roofing system (HVAC equipment, TV antennas, tie-ins to new roofing systems, etc), contact Mule-Hide for prior approval. Work directly related to the roofing system must be accomplished by a Mule-Hide Warranty Eligible Contractor.

13. If you have a leak, check for the obvious such as clogged roof drains, broken skylights, loose counterflashings, broken water pipes, leaking roof units, and storm damage. Note when the leaking occurs. Items such as heavy or light rain, wind direction, temperature and time of day are important clues for tracking suspected leaks. Does the leak start and stop with the rain, or does leaking continue after the rain has ceased?

If you believe that the leak is covered under the Mule-Hide warranty, please notify Mule-Hide's Warranty Department at (800) 786-1492 as soon as possible, and follow up with written notification in accordance with the warranty terms. Leaks resulting from the deterioration or failure of building components or physical damage are not covered by the Warranty. The building owner must pay the investigation and repair cost if the problem is found to be outside the scope of the Warranty.

For temporary repairs in the Mule-Hide membrane, use a one-part urethane sealant and contact Mule-Hide. **Do not use any Asphalt Product** to make repairs on any single-ply roof as it **WILL** degrade the membrane. If any asphalt product is used on a single-ply roofing membrane, that area will have to be removed and replaced at the Owner's expense.

The preceding information for care and maintenance for Mule-Hide roofs is not meant to be exhaustive and is for illustrative purposes only. Please refer to Mule-Hide's **Care and Maintenance Overview** literature on the Mule-Hide website(www.mulehide.com) for more information. Compliance with the above items will aid in assuring a durable, watertight roofing system.
